Crypto Genie Web-App

GitHub repo: [GitHub - dannynow6/Team_Project_WebDev](https://github.com/dannynow6/Team_Project_WebDev)

Introduction:

A web-app providing useful tools and info for users to leverage when managing cryptocurrency investments. Main features of Crypto-Genie: 1) Dollar – cost averaging simulator; 2) Top news headlines/stories about cryptocurrencies; 3) A tool to help users understand market moods/attitudes.

Design & Implementation:

We began by meeting and discussing ideas/layout. We then created a wireframe of the static homepage for Crypto Genie. The design of website is based on layout of other top sites offering info on cryptocurrencies.

Randall, Russell, and I each agreed to create a section of the homepage. Using GitHub, we started with base code, and each created a branch to work independently. Once done, the three branches were merged back into the main branch.

Conclusions:

Personally, this project confirmed the value of tools like Bootstrap and GitHub. Being familiar with the right tools makes the design and coding process far smoother and faster. I think our project is strong and look forward to adding functionality in the future.
